AI Engineer | LLMs, AI Agents, RAG pipeline & Full Stack | Turning Business Problems into Production AI Solutions
Chicago, Illinois, United States

## Summary

I'm a Forward Deployed Engineer with 3+ years of full-stack experience, now specializing in shipping AI-powered solutions directly with customers and product teams. I bridge the gap between business problems and technical execution — taking ambiguous customer challenges and turning them into deployed AI products using LLMs, LangGraph, and modern full-stack tooling (Angular, Node.js, MongoDB, GraphQL). What I bring to FDE roles: Rapid prototyping and deployment of AI-powered features in real customer environmentsDeep LLM integration experience — agents, tool calling, memory, and automation workflowsStrong communication skills to translate technical complexity into business value I finished my MS in Information Technology at Illinois Tech (Dec 2025), actively seeking FDE / AI Solutions Engineer roles where I can work closely with customers to ship impactful AI products fast. Let's build something that matters.

## Experience

### GoWebEz
Frontend Developer
March 2021 - December 2023 (2 years 10 months)
